

To: The President of Russia,
23, Ilyinka Street,
Moscow, 103132, Russia.

Goor, August 21, 2013

Dear Mr. President,
Dear Vladimir,

Let me first introduce myself briefly. I hold a Masters degree in Electrical Engineering from the University of Twente, The Netherlands, and have been studying free energy systems and aether physics for more than 5 years.

What I have discovered over the years is that there are possibilities to extract energy out of the environment / ZP field / aether / or whatever name you prefer. The theories I collected and developed offer the possibility of a/o running ordinary combustion engines with water as fuel. In actual fact, this is not entirely correct, but in practical terms, that's what it comes down to.

Now I know the Western economies are on the brink of collapse and who caused that: the Wall Street and London bankers. So, I fully understand the strategy you and your country are following, together with a/o the BRICS alliance, in order to transform our current global monetary system into a new, fair system, backed by physical metals. I am sure you know the history of the US A-bomb program, whereby a critical part of the enriched material used by the US has been produced in Germany, as Joseph Farrell describes in his book "The Reich of the Black Sun". I am also sure you know about the financing of both Germany and the Bolsheviks by Wall Street, as described by Prof. Antony Sutton in his books. So, what I see is that you and your country have learned a lot of lessons and are now working hard to get rid of the problem which caused so much trouble during a/o the past century and are also working hard on improving the living situation of the people in your country.

One important part of the problem we need to solve, is the petrodollar, which is tightly connected to Wall Street and which gives them their last stranglehold of power: the need for energy. I have heard from interviews with Jim Willie that your current strategy to solve that problem handles about the use of the natural gas reserves of your country, whereby Gazprom signed contracts to exploit your gas reserves and build pipe-lines to a/o Europe. However, I would like to suggest another, additional strategy.

On the page on Wikipedia about you, I read:

"To boost the market share of locally produced vehicles and support the Russia's automotive industry, the government under Putin implemented several protectionist measures and launched programs to attract foreign producers into the country. [...] Under Putin as President and Premier, most of the world's largest automotive companies opened plants in Russia, including Ford Motor Company, Toyota, General Motors, Nissan, Hyundai Motor, Suzuki, Magna International, Scania

and MAN SE."

Imagine if you would use these plants to produce vehicles which "run on water" instead of oil, and you would be the first country to use this clean and super-cheap technology! It would not only mean competitive advantages for your car industry, but also for the production of food and every other industry in your country. If you can eliminate energy costs, you would have a very big competitive advantage if you are the 'first to market' of this technology.

So, why am I writing you and not my government?

Well, our government is part of the problem. Most of Western Europe, the EU, has transformed from a confederation of free, independent democracies into a centrally planned federation, which mirrors the system in your country under the Bolsheviks, as your Prime Minister Mr. Medvedev pointed out a few months ago. And the US is even worse. Unfortunately, the control of the Wall Street bankers goes very far and has been going on for a very long time, even before WW-II. One element of control is the control of science, by controlling scientific "peer reviewed" papers, which brings me to the core of my letter to you.

What has happened is that science adopted two dogma's, which are not to be challenged:

- 1) Einstein's relativity theory;
- 2) Quantum mechanics.

Both theories are fundamentally wrong and are based on misinterpretations of the forces known as the "electromagnetic field". I will not go into details in this letter, you and/or your scientists can read these at my site:

<http://www.tuks.nl/wiki/index.php/Main/Ruins96YearsEinsteinRelativity>
<http://www.tuks.nl/wiki/index.php/Main/QuestioningQuantumMechanics>

Let me just quote Nikola Tesla on this, instead (July 10, 1937):

<http://www.tuks.nl/wiki/index.php/Main/TeslaPreparedStatement80stBirthday>

"According to the relativists, space has a tendency to curvature owing to an inherent property or presence of celestial bodies. Granting a semblance of reality to this fantastic idea, it is still self-contradictory. Every action is accompanied by an equivalent reaction and the effects of the latter are directly opposite to those of the former. Supposing that the bodies act upon the surrounding space causing curvature of the same, it appears to my simple mind that the curved spaces must react on the bodies and, producing the opposite effects, straighten out the curves. Since action and reaction are coexistent, it follows that the supposed curvature of space is entirely impossible. But even if it existed it would not explain the motions of the bodies as observed. Only the existence of a field of force can account for them and its assumption dispenses with space curvature. All literature on this subject is futile and destined to oblivion. So are also all attempts to explain the workings of the universe without recognizing the existence of the ether and the indispensable function it plays in the phenomena."

The strategy that has been followed by Western science is to ridicule and obfuscate the aether theory, which has everything to do with the cold war. The Wall Street bankers and their allies know perfectly well that with this theory, one can build free energy devices as well as anti-gravity devices, similar to what we would call a "UFO". There is information circulating on the internet, which suggest that the Germans already developed craft like that during WW-II:

<http://discaircraft.greyfalcon.us/HAUNEBU.htm>

Of course, I have no means to validate the documents cited on the internet, so these may or may not be genuine. However, I do know the principles along which such craft could be constructed, because of the work of Paul Stowe, who explains in very simple ways what gravity is and how it is related to the electric field, based on a simple and elegant aether theory:

<http://www.tuks.nl/wiki/index.php/Main/StowePersonalEMail>

I will not bother you with the details, other than to say the the idea that "gravity = Grad E" does explain the so-called Biefeld-Brown effect, the effect you would use if you were to build "UFO's":

http://en.wikipedia.org/wiki/Biefeld%E2%80%93Brown_effect

While these are exciting and promising theories for the future of mankind, building UFO's does not solve the problems we are facing today regarding the energy needs of the people on this planet. What we need now, are cheap and simple devices capable of powering our existing vehicles and infrastructure. Such a device exists, and has been developed in the 1990's by Stan Meyer. His patents can be found at my site:

<http://www.tuks.nl/pdf/Patents/Meyer/>

So far, science of course ridiculed this development and tried to burry it. However, my analysis lead me to the conclusion that such a simple system is indeed possible. It does not really run "on water", but it extract energy out of the environment along the theory of Prof. Claus Turtur, which is actually very simple and straightforward to understand by any engineer/scientist. I made a small video a while ago, wherein I explain how this system works, as well as the so called "cold fusion" apparatus which kept the scientific community busy in the 1980's, but are still not understood:

<http://www.youtube.com/watch?v=tZf0yhe4B80>

Underneath the video, you will find all the references you would need, along with the more practical instructions provided by Patrick Kelly:

<http://www.free-energy-info.tuks.nl/Chapt10.html>

This is not the whole story, though. After I published this, I came into contact with a company which already has a generator device running on water, whereby they are able to produce over 50 kW of electric energy with 6 kW of input of electric current. I have visited this company and may go work for them in the future. At their premises, I witnessed them igniting what they called "water gas", which implodes instead of exploding. This is the so-called "Brown's gas" which is also ridiculed by main stream science, of course. Some more info on this can be found here, with a/o references to the work of Mr. Ohmasa:

<http://www.eagle-research.com/cms/blog/browns-gas/ohmasa-gas-vs-browns-gas>

As a final point, I refer to some papers I collected about super capacitors, which make use of nickel hydroxide as a dielectric layer:

http://www.tuks.nl/pdf/Reference_Material/Electrolytic_Caps_and_Super_Caps/

We will be experimenting with the use of a nickel hydroxide layer in the system of the mentioned

company in order to make further improvements.

I fully understand that most of the information shared is not your personal expertise, but I am sure your scientists will be able to work with this for the benefit of all of mankind. In case you are interested, of course I would be interested in coming into contact with Russian companies which might be interested in the further development and/or production of such systems and/or would be interested in investing in the company I mentioned.

Yours truly,

Arend Lammertink, MSc.
